## Maclaurin and Taylor Series

## 1 Maclaurin's expansion

$$f(x) = f(0) + f'(0)x + f''(0)\frac{x^2}{2!} + f'''(0)\frac{x^3}{3!} + \dots + f^r(0)\frac{x^r}{r!}\dots$$

For the continuous function, f, given by  $f: x \Rightarrow f(x)$  (where x is real), then providing f(0), f'(0), f''(0) etc all have finite values. This is an infinite series.

## 1.1 Example

Given that  $f(x) = e^x$  can be written as an infinite series in the form:

$$f(x) = e^x = a_0 + a_1 x + a_2 x^2 + a_3 x^3 + \dots + a_r x^4 + \dots$$

And that it is valid to differentiate an infinite series term by term, show that:

$$e^2 = 1 + x + \frac{x^2}{2!} + \frac{x^3}{3!} + \dots + \frac{x^r}{r!} + \dots$$

Find up to the third differential of f(x) and the value of zero for each

$$f(x) = e^{x} f(0) = 1$$
  

$$f'(x) = e^{x} f''(0) = 1$$
  

$$f''(x) = e^{x} f''(0) = 1$$
  

$$f'''(x) = e^{x} f'''(0) = 1$$

$$f(x) = 1 + 1 \times x + 1 \times \frac{x^2}{2!} + 1 \times \frac{x^3}{3!}$$
$$f(x) = 1 + x + \frac{x^2}{2!} + \frac{x^3}{3!} + \dots + \frac{x^r}{r!} + \dots$$

## 1.2 Standard results

Standard results are given on the data sheet, these can then be used for adapted forms of the results also. Remember to consider the limits where appropriate.
